Intro spans bars 1-21

[illegible][illegible]

Figure 1 illustrates the construction of a 17-bit binary sequence. The sequence is divided into three parts: a 10-bit prefix, a 4-bit middle section, and a 3-bit suffix. The 10-bit prefix is constructed by interleaving a 5-bit sequence (2, 1, 2, 0, 2) with zeros. The 4-bit middle section is constructed by interleaving a 2-bit sequence (0, 2) with zeros. The 3-bit suffix is constructed by interleaving a 1-bit sequence (0) with zeros. The final 17-bit sequence is: 2, 0, 1, 0, 2, 0, 0, 2, 0, 0, 0, 0, 2, 0, 0, 0, 0.

41

Oh Lordy me, oh Lordy my
See when you haven't got a dime.
Now I'm troubling so deep I can't eat or sleep.
I see when your troubles get like mine.
Now see when your troubles get like mine.

I asked my captain for a job. Son, what can you do?
I can line the tracks. I can ball the jack.
I can pick and shovel too.
I can pick and shovel too.

And I'm leaving on an early morning train.
Leaving honey baby now.
And I'm going down the track. I ain't never coming back.
My lady's lyin' with another man.
My lady's lyin' with another man.

It's oh Lordy me, oh Lordy my
See when you haven't got a dime
I'm troublin' so deep that I can't eat or sleep
See when your troubles get like mine
Now see when your troubles get like mine.
I see when your troubles get like mine.
Lord, Lord, see you when your troubles get like mine.
